

Who we are

2015, start-up phase : the co-founders are two computer physicians specialized in the use of the widespread [SNOMED CT](#) terminology to help to structure medical data.

2016, deployment step : they have recently been joined by healthsector entrepreneurs who enabled the operational start-up

Vision

“ BT Clinical Computing offers a structured SNOMED CT inside solution from existing data and on-line medical input ”

BT Clinical Computing aims at structuring the existing data of medical and hospital information systems into a SNOMED CT repository

Product

Eighty percent of medical data are in free text... Natural Language Parsing of existing medical reports to SNOMED CT discloses a gold mine of clinical data for further use.

The intelligent SNOMED CT repository can feed decision support systems and business intelligence.

Use cases

BT Clinical Computing aims at structuring the existing data of medical and hospital information systems into a SNOMED CT repository from where the data can be reused for data extraction for continuity of care (Patient Summary and Personal Health Record), secondary financial coding (ICD10), and Clinical Research.

Partners

BT Clinical Computing aims at integrating the solutions whenever possible with non-exclusive partners.

June 2015, the Walloon Region, through its incubator  has selected BT Clinical Computing as a promising Start Up with international potential.

April 2016, with  , specialised in medical IT for hospitals including ICD-coding systems for hospital data coding in Belgium

April 2016, with  , offering a SNOMED CT-based Terminology Management System.

May 2016,  offering intelligent SNOMED CT-indexed medical data storage

Market

The market has 3 segments :

1. Hospitals
2. Medical Software Vendors
3. Pharmaceutical sector

3 steps to the Market

1. National: Belgium 2017 (Pilot) 

2. Europe B, LUX , NL , CH , F : 2017-2018

3. World: 2018-2020
