The development of a global language for health, uniting health systems from around the world and enabling them to communicate with and understand one another, is an international endeavor and is the founding principle of SNOMED International. SNOMED International is a not-for-profit organization that owns, administers and develops SNOMED CT to deliver a universal clinical terminology.

**Terminology Development Specialist**

This role will resonate with you if you want to positively influence the future healthcare landscape and contribute to an organization recognized globally as a leader in clinical terminology - all while working from home.

Leading the development and delivery of SNOMED CT product support services related to SNOMED CT content development, including education, documentation, tutorials and related activities, the Terminology Development Specialist will:

- provide effective professional oversight of content-related education tasks completed by other staff and contractors;
- ensure delivery milestones for tasks and projects assigned to them are met;
- ensure accuracy, fitness for purpose and quality of all educational materials and documents that they develop, update or review;
- ensure the accuracy, clarity, timeliness and relevance of their responses to enquiries from internal and external customers and stakeholders; and
- communicate at all times in a fashion that maintains and enhances the reputation of both the organization and its products.

Reporting to the Head of Education & Product Support, the Terminology Development Specialist will work closely with the Head of Education & Product Support and Senior Terminologists to support SNOMED International’s strategic focus on expanding their education services related to content authoring. The Terminology Development Specialist will also work with other SNOMED International staff and a range of stakeholders, including National Release Center (NRC) staff and healthcare provider organizations, to promote and support the effective adoption, extension and use of SNOMED CT. Hallmarks of this role will include designing, developing and delivering SNOMED CT education presentations, webinars, certification, documentation and other education materials. Success in this role will require the incumbent to continuously maintain, refine and expand their SNOMED CT authoring skills through contributions to international content development tasks.
The Terminology Development Specialist will be an educator at heart, whose passion and purpose reflect SNOMED’s values of industry leadership, collaboration, quality, openness and accountability to its customers. The ideal candidate will be a strong and engaging communicator who yearns to foster learning through collaboration and commitment to professional integrity. This role will resonate with individuals who aspire to positively influence the future healthcare landscape and who yearn to contribute on an international scale.

In addition to a degree in clinical healthcare or medical informatics, the likely candidate is already an experienced developer of SNOMED CT content/authoring, has sound knowledge of SNOMED CT editorial guidance and a thirst for teaching, curriculum design and presentation.
